

Rimple Chaudhary

Full-Stack Developer · MERN Stack

Mohali, India | +91 8894319767 | rimplechaudhary1@gmail.com | LinkedIn | GitHub

Summary

Full-Stack Developer working across React and Next.js on the front end and Node.js, Express and MongoDB on the back end, with REST API development and third-party service integration on enterprise client platforms. Built a custom headless CMS on MongoDB with Mongoose data models, authenticated API routes, Zod request validation and presigned media uploads.

Technical Skills

Backend: Node.js, Express, REST API development, MongoDB / Mongoose, SQL, NextAuth, Zod validation

Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, responsive web design

State & UI: Redux / Redux Toolkit, React Query, SWR, Tailwind CSS, Ant Design, Figma

Cloud & Storage: AWS S3, AWS Secrets Manager, S3-compatible object storage, Vercel, Docker, CI/CD

Integrations & CMS: Third-party REST APIs, DigiLocker identity verification, payments, analytics, notifications, WebSockets, Strapi, custom headless CMS

Testing & Tooling: Jest, React Testing Library, Postman, Git/GitHub, ESLint, Vite, Webpack, Agile/Scrum, JIRA

AI-Assisted Development: Claude Code, GitHub Copilot

AI & Workflow Automation: LangChain, LangGraph, n8n

Experience

Software Developer, Technogetic Pvt. Ltd.

Nov 2023 – Present

Mohali, India · Client projects: TechEx, EMAAR India, MaxLife Insurance

- Build REST APIs with Node.js and Express, and integrate third-party services into client platforms.
- Integrate REST APIs and AWS services into customer-facing portals, including multi-step DigiLocker and Aadhaar identity verification workflows, processing 500+ verifications monthly.
- Build portals and dashboards in React and Next.js serving 10,000+ end users, using Redux and React Query for application state and server data.
- Cut page load time by 40% using React.lazy code splitting and SWR caching, reaching a 90+ Lighthouse performance score.

Employee of the Year — 2024

Software Developer Intern, Innow8 Apps

Apr 2023 – Oct 2023

Internship · Project: TaxZap — tax filing platform

- Integrated 3 third-party APIs (payments, analytics, notifications) into the frontend, working with 2 backend engineers to ensure seamless data flow.
- Built real-time data modules with WebSocket integration, reducing dashboard data refresh latency by 50%.
- Developed 15+ responsive UI components in React and Redux for a 10-step tax filing workflow.

Selected Projects

TechEx — Agency Site & Headless CMS

Next.js 14, TypeScript, MongoDB / Mongoose, NextAuth

shopify-agency-site.vercel.app

- Built a custom headless CMS on MongoDB with Mongoose data models and Next.js API routes, letting the content team publish pages, case studies and media without a third-party CMS vendor.
- Implemented a draft/publish workflow with live preview that renders drafts through the production template, so editors review the real page before publishing.
- Added authentication with NextAuth and role-based access across CMS routes, with Zod request validation.
- Built a media library with presigned uploads to S3-compatible object storage using the AWS S3 SDK.
- Raised the Lighthouse performance score from 60 to 93 by reworking image delivery, eliminating render-blocking resources and cutting client-side JavaScript overhead.
- Minimised client-side JavaScript by keeping most of the interface in React Server Components, and served the public site through static generation with incremental revalidation.

EMAAR India — Customer Web Portal

React, TypeScript, React Query, Node.js, AWS

- Integrated the DigiLocker API for Aadhaar-based identity verification through a multi-step authentication flow, with API credentials held in AWS Secrets Manager.
- Implemented secure document upload and access using AWS S3 pre-signed URLs with time-limited access, handling 1,000+ document uploads monthly.
- Reduced redundant client-side network requests by 30% with React Query caching.
- Redesigned the No Objection Certificate journey and streamlined form validation, improving completion rates by 25%.

MaxLife Insurance Platform

React, Redux, Strapi CMS, responsive design

- Integrated Strapi CMS for content-driven page rendering, letting the marketing team update 50+ pages without developer involvement.
- Built policyholder dashboards with Redux state management, handling data flows across 12+ policy types and 4 user roles.
- Established a reusable component architecture of 15+ shared components, improving UI consistency and reducing new feature development time by 20%.
