Summary

Full-Stack Software Engineer with 3+ years building production platforms for enterprise clients including EMAAR India and MaxLife Insurance, with React and Next.js on the front end and Node.js, Express, MongoDB and MySQL on the back end. Trusted with security-sensitive flows such as Aadhaar identity verification, and focused on measurable results: 40% faster page loads, a 25% lift in form completion, and a CMS platform built end to end. Experienced in mentoring junior engineers and leading code reviews for the EMAAR India portal to maintain high standards of code quality prior to production delivery. Employee of the Year 2024.

Technical Skills

Backend: Node.js, Express, REST APIs, MongoDB / Mongoose, MySQL, JWT, NextAuth, Zod

Frontend: React.js (Hooks, Context API), Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3

State & UI: Redux / Redux Toolkit, React Query, SWR, Tailwind CSS, Ant Design, Figma

Cloud & Storage: AWS S3, AWS Secrets Manager, S3-compatible object storage, Vercel, CI/CD

Integrations & CMS: Third-party REST APIs, DigiLocker identity verification, payments, analytics, notifications, WebSockets, Strapi

Testing & Tooling: Jest, React Testing Library, Postman, Git/GitHub, ESLint, Vite, Webpack, Agile/Scrum, JIRA

AI & Automation: n8n, Gemini API, Pinecone (RAG), LangChain, LangGraph, Claude Code, GitHub Copilot

Professional Experience

Senior Software Engineer
Mar 2026 – Present

Technogetic Pvt. Ltd. · Mohali, India · Client projects: TechEx, EMAAR India, MaxLife Insurance

- Write unit and component tests with Jest and React Testing Library, deploy Next.js applications on Vercel, and debug and resolve production issues across frontend and backend.
- Built an n8n AI chatbot for an astrology client, using Gemini with Pinecone RAG and MongoDB memory, that answers visitor queries in English and Hinglish and automatically routes qualified leads to the client's CRM.
- Mentored two junior developers on the EMAAR India portal and reviewed their pull requests, keeping TypeScript types, component structure and data-fetching patterns consistent across the codebase.

Junior Software Developer
Nov 2023 – Feb 2026

Technogetic Pvt. Ltd. · Mohali, India

- Built REST APIs in Node.js and Express with JWT authentication, and integrated AWS and third-party services, including multi-step DigiLocker and Aadhaar verification, processing 500+ verifications monthly.
- Built responsive, cross-browser portals and dashboards in React and Next.js serving 10,000+ end users, using Redux and React Query for application state and server data.
- Cut page load time by 40% with React.lazy code splitting and SWR caching, reaching 90+ on Lighthouse.
- Recognised as Employee of the Year 2024.

Software Developer Intern
Apr 2023 – Oct 2023

Innow8 Apps · Mohali, India · Project: TaxZap, a tax filing platform

- Integrated 3 third-party APIs (payments, analytics, notifications), working with 2 backend engineers.
- Built real-time data modules with WebSocket integration, reducing dashboard data refresh latency by 50%.

- Developed 15+ responsive UI components in React and Redux for a 10-step tax filing workflow.

Selected Projects

TechEx — Agency Site & Headless CMS Sep 2026 – Present

Next.js 14, TypeScript, MongoDB / Mongoose, NextAuth, Vercel · shopify-agency-site.vercel.app

- Designed and built the platform end to end, including a custom headless CMS with Mongoose schemas for pages, case studies and media behind Next.js API routes, removing the need for a third-party CMS vendor.
- Separated editing from delivery: editors preview drafts in the production template, while the public site uses static generation with incremental revalidation, staying fast without manual rebuilds.
- Designed the access-control model: NextAuth sessions with role-based permissions on all CMS API routes.
- Built a media library with presigned uploads, so files go straight from the browser to S3-compatible storage without passing through the application server.
- Improved the Lighthouse performance score from 60 to 93 by optimising image delivery, eliminating render-blocking resources and reducing client-side JavaScript through React Server Components.

EMAAR India — Customer Web Portal Nov 2024 – Aug 2026

React, TypeScript, React Query, Node.js, AWS · customerconnect.emaar.com

- Integrated the DigiLocker API for Aadhaar-based identity verification through a multi-step authentication flow, with API credentials held in AWS Secrets Manager.
- Implemented secure document upload and access using AWS S3 pre-signed URLs with time-limited access, handling 1,000+ document uploads monthly.
- Reduced redundant client-side network requests by 30% with React Query caching.
- Redesigned the No Objection Certificate journey and its form validation, lifting completion rates by 25%.

MaxLife Insurance Platform Nov 2023 – Oct 2024

React, Redux, Strapi CMS, responsive design · axismaxlife.com/cs/login

- Integrated Strapi CMS so the marketing team could update 50+ content pages without developers.
- Built policyholder dashboards with Redux, handling data flows across 12+ policy types and 4 user roles.
- Established a reusable component architecture of 15+ shared components, improving UI consistency and reducing new feature development time by 20%.

Education

Master of Engineering (M.E.) 2021

Panjab University, Chandigarh

Bachelor of Technology (B.Tech) 2018

Jaypee University of Information Technology, Waknaghat

Certifications

Quickstart: LangChain Essentials – TypeScript, LangChain Academy Jun 2026

Quickstart: LangGraph Essentials – TypeScript, LangChain Academy Jun 2026
